LawLytics

Dear LawLytics Hiring Team,

When I saw your posting on Indeed for a Junior Website Developer, I couldn't wait to apply. I recently graduated from Actualize Coding bootcamp where I learned the fundamentals of full stack web development and gained experience with many different technologies. In addition to developing skills in debugging and problem solving, I built a full stack web app with RESTful APIs and Ruby on Rails. The frontend uses npm, webpack, Vue.js, Bootstrap, Vue Draggable, Chart.js, and Postman. I also have a responsive Portfolio Website and have experience with Adobe Photoshop and Illustrator. Two of the driving factors of my success in the bootcamp was my curiosity to try new technologies and my creative problem solving, both of which have continued to motivate my growth post-graduation as I am furthering my education by learning Python, practicing JavaScript, and sharpening my UX/UI skills. As a Junior Website Developer with LawLytics I would use my natural curiosity with my current technical skills to build and support applications for your company and hopefully learn as much as I can from your team in the future.

In addition to my technical skills I learned from Actualize, I bring 15 years of experience in the hospitality and service industry to my work as a software engineer. Building relationships with hundreds of clients, providing personalized solutions to problems, and managing fast-paced, high volume dining environments have honed my strengths in attention to detail, organization, and customer service. As a Junior Website Developer at LawLytics, this unique background would allow me to build solutions for complex problems while prioritizing customer expectations, project specifications, and end-user experiences.

Included in my resume is a link for my [GitHub](#) account and my capstone project's [front](#) and [back](#) end code, both of which provide further detail on the technical skills I've described above. I would love the opportunity to further discuss the Junior Website Developer position and my qualifications, and can be reached any time at 417-793-3477 or geoffarner5@gmail.com. Thank you for your time and consideration.

Sincerely,

Geoff Arner
